Lav et simpelt interaktivt spil - Snake

Bjarke

Features

The eel will be controlled by keyboard input, and the site will not be responsive.
The eel grows 1 square longer for each fish it eats.
When a fish is eaten, another will spawn randomly on the grid, but not inside the eel.
You lose if the eel's head touches its tail or the walls.
When you lose, a game over screen will pop up with your time in seconds, how many fish you ate (aka your score), and a *Retry* button.

Visual design

Overall design is reminiscent of Google Snake.
A grayish blue eel (#4F759B) swimming through a checkered 15x15 grid of dark blue tiles (#000140 and #000150) to eat bright blue fish (#1C8BDB).
The background will just be white (#F8F8F9).

The eel doesn't have to be detailed; it just needs something to show which part is the head and which direction it is facing. The body can be made with soft-edge squares for a smooth end of the tail, and the eyes should be cutesy looking black dots with a white shimmer. The head should have circular-smooth edges.

The fish will just be fontawesome icons (). You could add a bubble effect when they are eaten: the css would just be a transparent circle with a white outline and a white streak in a corner, then some lines in 8 directions when they pop. The animation should probably be done with an actual animation; a transition seems impossible to do here.

The game over menu should be emerald green (#44CF6C) with grayish blue buttons (#4F759B) and white text (#FFFFFF).

Project plan

Week 1	Week 2	Week 3
Planning	JS menus and working on the snake controls	JS
Basic html/css	Snake controls JS	JS
Html/css	Snake controls JS	JS
Css animation	Sound effects (and maybe css animation) and JS	Victory confetti for beating your record + final touches
Css animation and JS menus	JS	Final touches

Opdatering/dokumentering af arbejdsprocessen foregår i beskrivelsen af github opdateringer.

NOTE TO SELF

The final product is supposed to be a demo. Keep track of the things you learn throughout the process and present them on the final day.
The judgement criteria are:
Independant workflow,
Relevancy to the assignment,
If the product is good/finished,
Planning and how well i stick to the plans,
The presentation and reflection,
Bonus points for using modern tools and stuff, for creativity in problem solving, and for well-documented work process.
